

**MAXCUT®
GUIDE
BARS**

MAXCUT® GUIDE BARS

MaxCut® offers premium guide bars designed for all major types of concrete chainsaws, including hydraulic, gas, high-cycle, pneumatic, and electric saws. Like our chains, MaxCut guide bars are built to perform in the toughest cutting applications, including concrete, brick, decorative stone, and utility pipe.

ENGINEERED FOR PERFORMANCE

Like our chains and sprockets, MaxCut® sprockets are proudly manufactured in the USA, delivering reliable performance, durability, and precise fit.

The center of the bar is designed to be slightly wider than the ends, allowing it to conform to the natural slack of the chain. This design helps improve tracking, reduce wear, and extend both bar and chain life.

Precision-machined water ports on alternating sides of the bar ensure even water distribution across the entire chain - not just one side. The separated bar design highlights the internal water manifold, delivering consistent cooling and debris removal throughout the cut.

AVAILABLE GUIDE BARS

We offer guide bars in a wide range of sizes: from 10" to 30", to match the exact needs of your job.

**Multiple configurations available to match
your equipment and application needs.**
